CUSTOMER INSIGHTS

Who is CLICX really winning, and at whose expense?

Five questions on where 1.8M CLICX customers come from, who they are, what they use, who stays active, and whether CLICX cannibalizes KTB

October 2026 | CLICX data as of Sep 2026; AIS, KTB, OR data as of Apr 2026

What have CLICX's first 1.8M customers told us?

CLICX is an ecosystem bank: it wins consortium customers aged 25–39 who come for credit, and mostly grows the pie for KTB rather than taking from it

#	Question	Answer	Evidence
1	Do all CLICX customers come from captive consortium customers?	**Almost all**	96% come from the AIS x KTB x OR base; only 51K are outside it. Yet CLICX reaches just 3.7% of the 49M base
2	Are the personas who come the ones we planned for?	**Mostly, with gaps**	Tech-Savvy over-index 2.2x and gig workers convert best (Freelancer 40%); Multiple-Bank and 40+ customers under-index
3	Do different personas come for the same or different products?	**Same entry, different use**	84–92% of every occupation apply for a loan; White-collar books loans (11%), Merchants hold deposits (20%), gig workers rarely get booked (5–6%)
4	Is the persona different for active vs inactive customers?	**Yes**	Active base skews to White-collar and Merchant (65% vs 52%), post-paid and FBB users; inactive skews to Blue-collar, prepaid and unknown
5	Does CLICX cannibalize KTB customers or products?	**Limited**	Only 13% of overlap (212K) are KTB-loyal; 61% are competitor-loyal or KTB-inactive. 116K CLICX borrowers have no KTB Jai-pump loan

Source: CLICX data room (Sep 2026); AIS, KTB, OR captive data (Apr 2026); Data for Business Strategy (14 Oct 2026)

Do all current CLICX customers come from captive consortium customers?

Almost all: 96% of CLICX customers already bank, phone or fill up with KTB, AIS or OR; only 51K come from outside. But the consortium is far from tapped, with only 3.7% penetration

96%

of 1.8M CLICX customers come from the consortium base

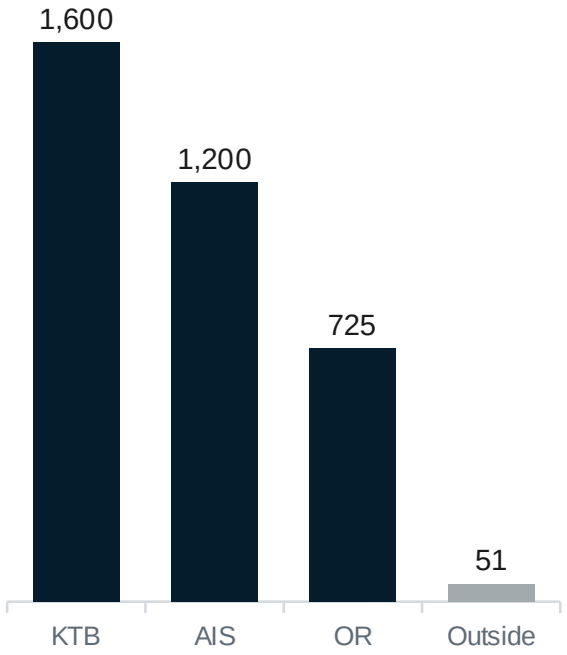

51K

CLICX customers who are not AIS, KTB or OR customers

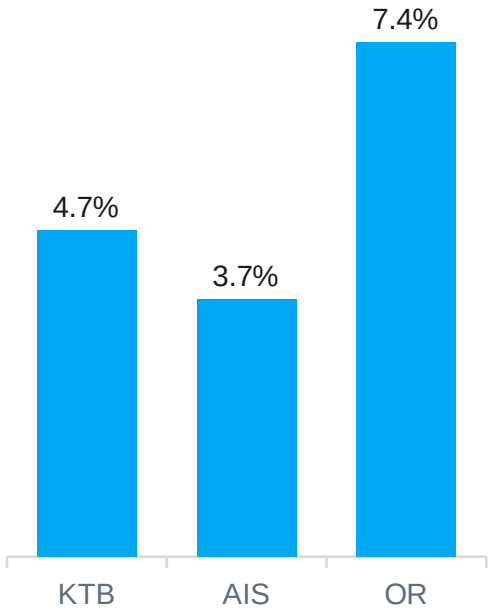

47M

consortium customers not yet on CLICX

CLICX customers by partner, K

Penetration of partner base

SO WHAT

1. **KTB is the main gateway**
   88% of CLICX customers are KTB customers (1.6M), helped by Paotang onboarding

2. **Customers sit in several partners**
   Shares add up to 195%: most customers are known to 2+ partners, giving rich data for credit

3. **AIS is the biggest headroom**
   Lowest penetration (3.7%) on the largest base (~32M). OR converts best at 7.4%

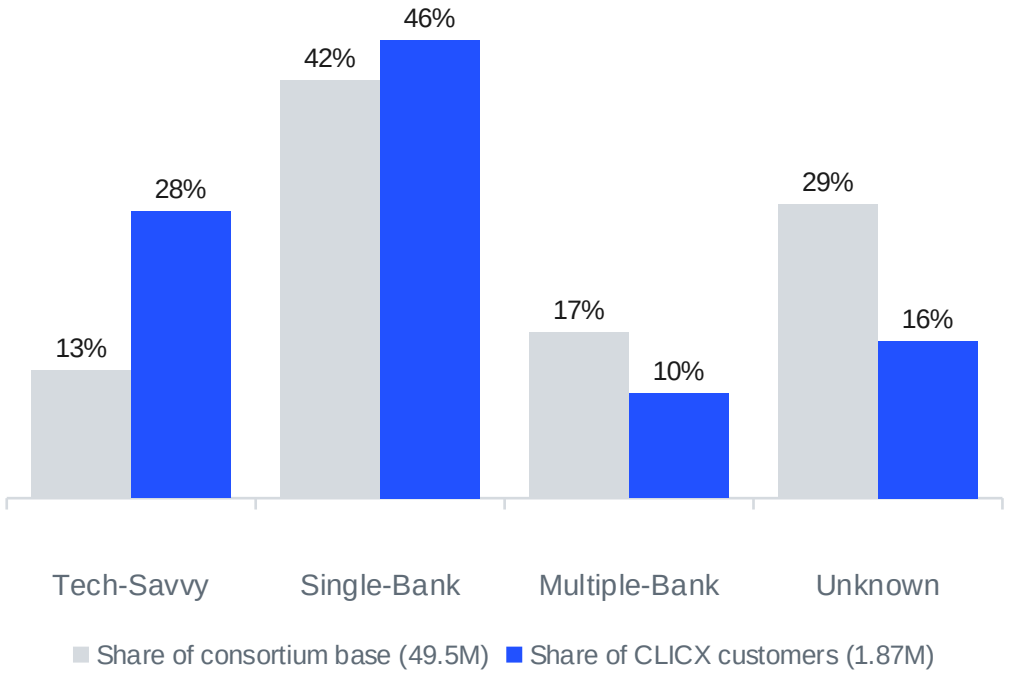

Note: one customer can belong to several partners, so partner shares add up to 195%. Penetration = CLICX customers ÷ partner customer base. 85% of CLICX customers gave consent for data matching

Source: CLICX data (Sep 2026); AIS, KTB, OR data (Apr 2026)

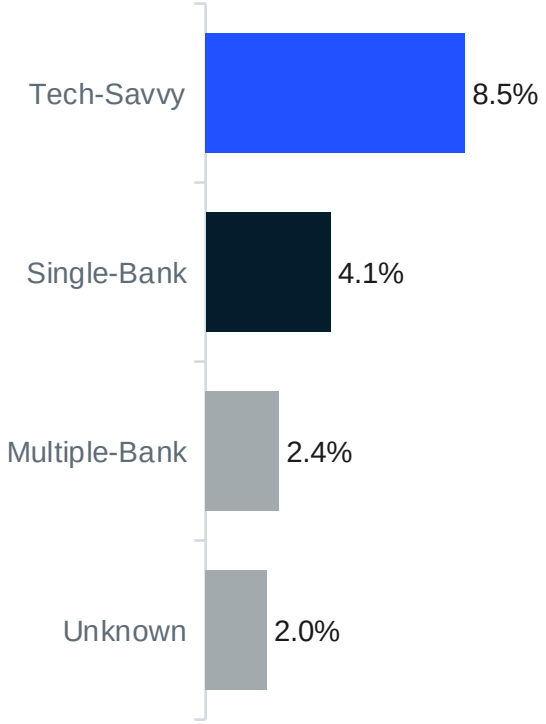

Are the personas of customers who come to CLICX the same as we planned?

Mostly yes. The planned Tech-Savvy target over-indexes 2.2x and Single-Bank users bring the volume, but Multiple-Bank users, also a target, are under-won

Persona mix: consortium base vs CLICX, %

Penetration by persona

SO WHAT

1. **Tech-Savvy: target hit**
   533K customers, 28% of CLICX from 13% of the base; penetration 8.5% (2.2x average), peaking at 13% for ages 30–34

2. **Single-Bank: volume engine**
   850K (45% of CLICX). 577K are KTB customers without AIS, a pool to cross-sell AIS

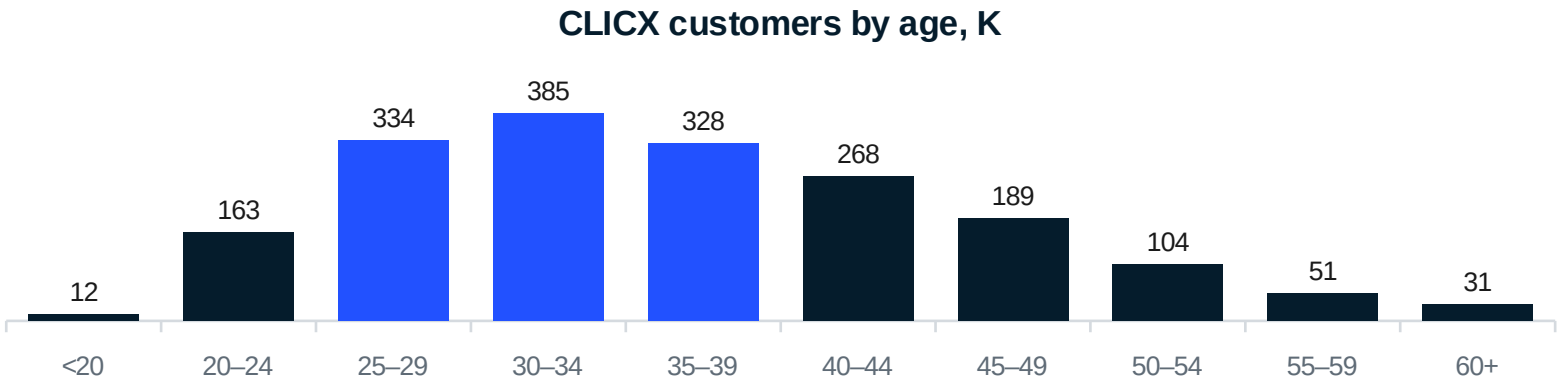

3. **Multiple-Bank: the miss**
   8.2M base but only 2.4% penetration. CLICX is not yet winning customers who already shop around banks

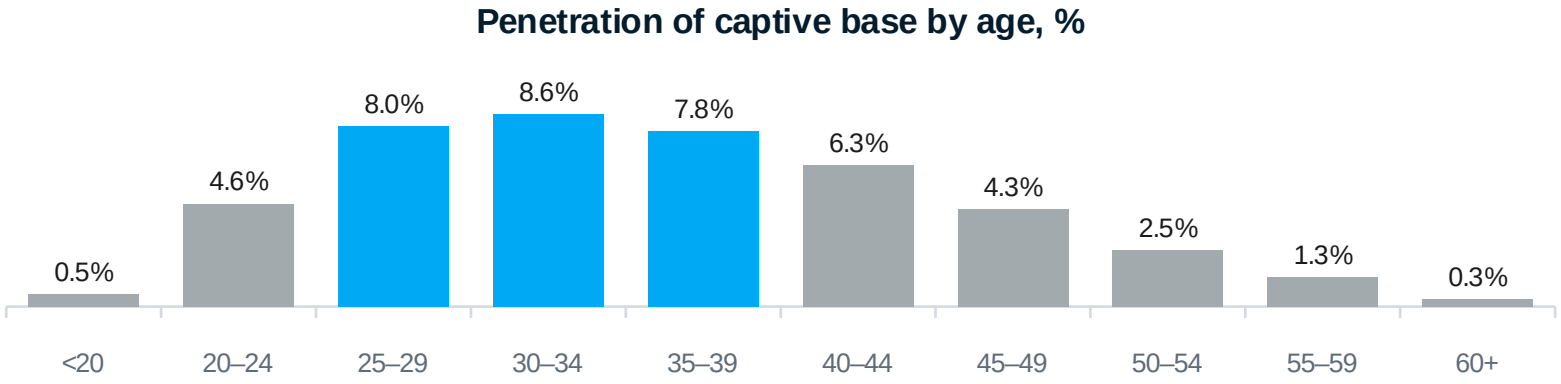

Note: personas assigned by AIS and KTB. Single-Bank = uses one bank, or KTB customer holding Next but inactive. Index = share of CLICX ÷ share of consortium base

Source: CLICX data (Sep 2026); AIS, KTB, OR data (Apr 2026); initial target persona benchmark

Does the age profile of CLICX customers match the target pool?

No. The target pool skews older, but CLICX concentrates in ages 25–39: 56% of customers vs 29% of the base. Penetration falls off sharply after 45

SO WHAT

1. **Sweet spot is 25–39**
   1.05M customers (56% of CLICX); penetration of 8–9% vs 3.8% overall

2. **Older base is untouched**
   Customers aged 40+ make up 58% of the known-age base but only 34% of CLICX; 60+ penetration is 0.3% on 9.4M people

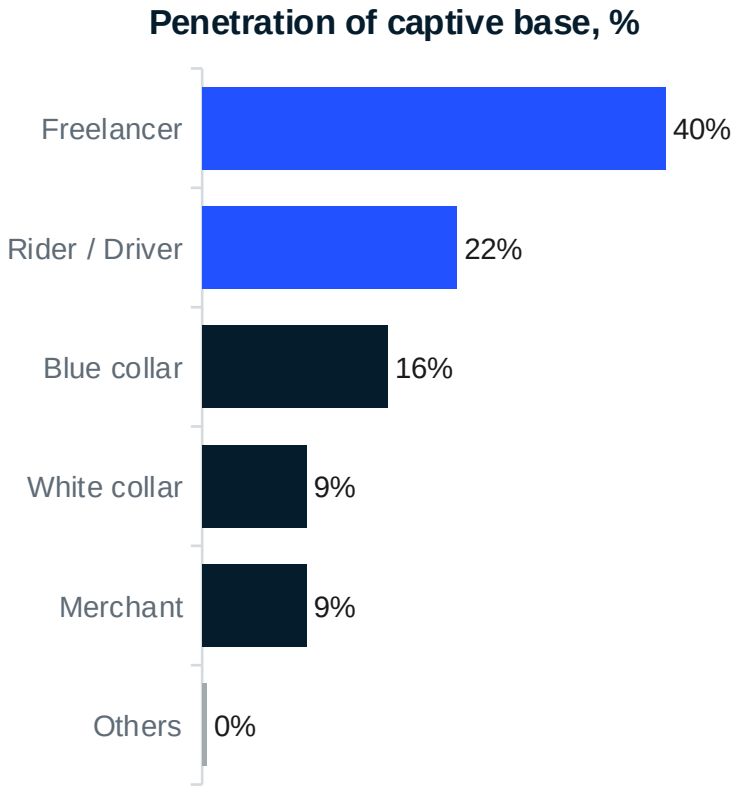

3. **Room left in the core**
   2.1M unconverted Tech-Savvy aged 25–39, 1.3M young tech users under 25 and 5.4M Single-Bank millennials

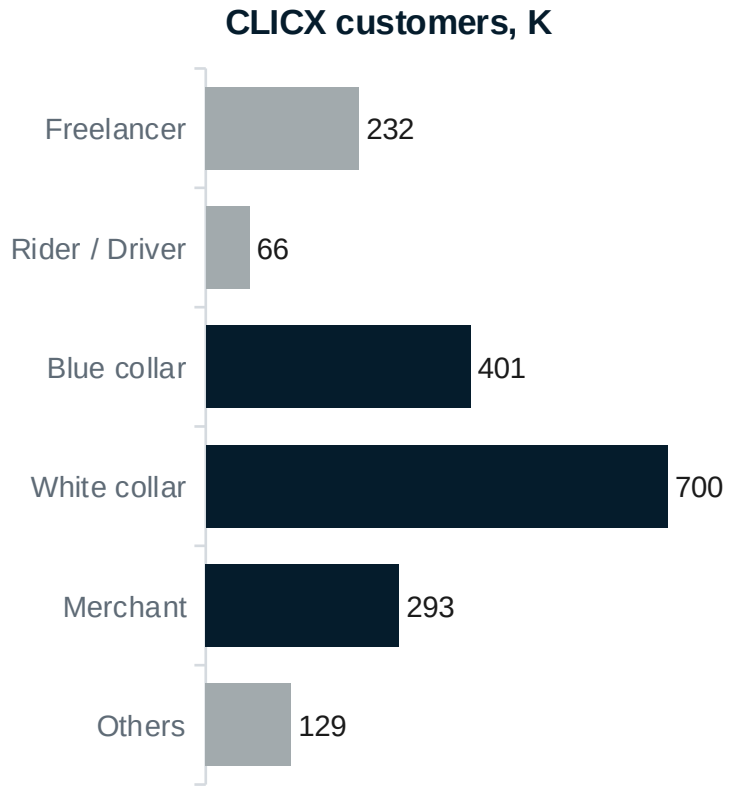

Note: penetration = CLICX customers ÷ consortium captive customers in that age band; base share excludes 4.7M customers of unknown age

Source: CLICX data (Sep 2026); AIS, KTB, OR data (Apr 2026)

Are we reaching the thin-file, real-income customers our strategy targets?

Yes. Gig workers convert 5–10x better than average (Freelancer 40%, Rider/Driver 22%), and unserved/underserved borrowers are 35% of loans vs a 30% target

SO WHAT

1. **Gig workers: best fit**
   Freelancers and riders convert at 40% and 22% of their small captive pools, which validates the alternative-data lending thesis

2. **Collars: the volume**
   White- and Blue-collar make up 1.1M customers, over 60% of the portfolio

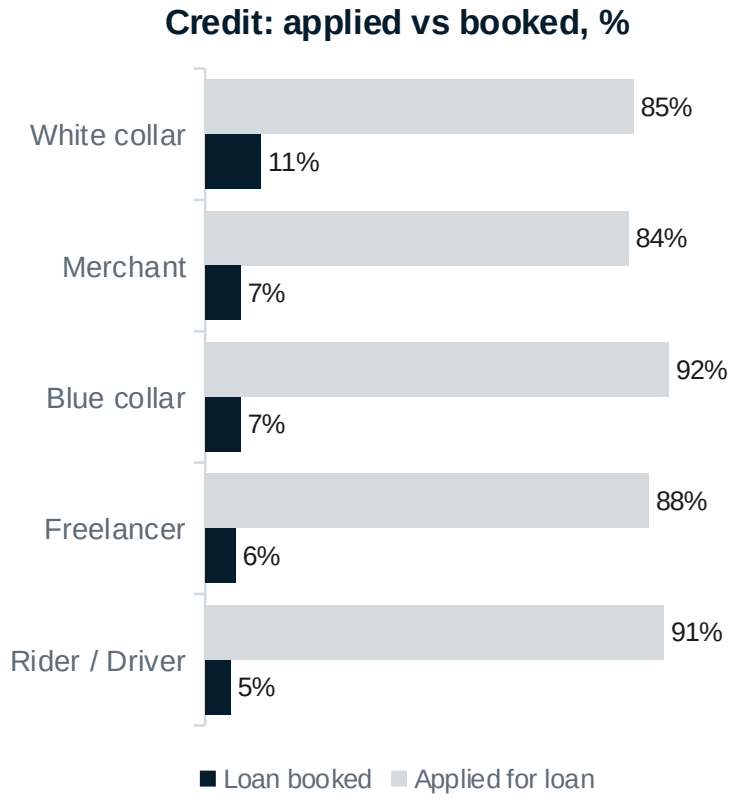

3. **Merchants: proven, not scaled**
   293K customers at 9% penetration from a 3.3M base, an entry point for SME supply-chain financing

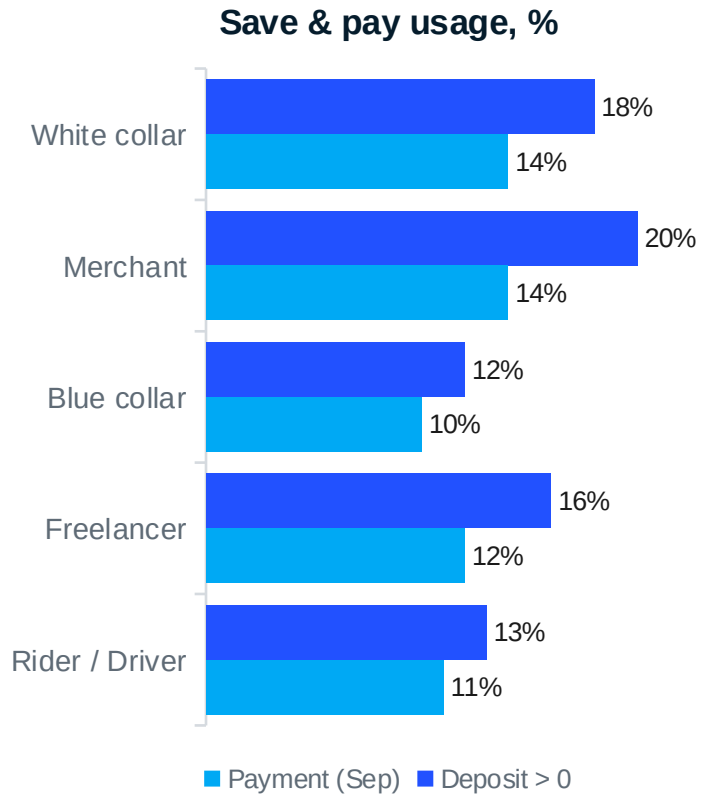

Note: occupation from AIS x KTB x OR x CLICX matched data; penetration = CLICX customers ÷ captive customers in that occupation; Others = unknown occupation

Source: Data team occupation analysis (Oct 2026); CLICX 5-Year Business Plan scorecard (Dec 2026 target)

For different customer personas, do they come for the same or different products?

They come for the same thing, credit: 84–92% of every occupation applies for a loan. What they end up using differs: White-collar books loans, Merchants keep deposits, gig workers are mostly declined

SO WHAT

1. **Credit is the hook for all**
   1.52M customers (84%) have applied for a loan, whatever their occupation
2. **White-collar: borrow and pay**
   Highest booking rate (11%, 79K loans) and 14% pay monthly. The most complete product user
3. **Merchant: deposits**
   Highest deposit rate (20%) and payment use (14%), a natural fit for business accounts and SME credit
4. **Gig and Blue-collar: leakage**
   Over 90% apply, but only 5–7% are booked. Underwriting, not demand, is the bottleneck

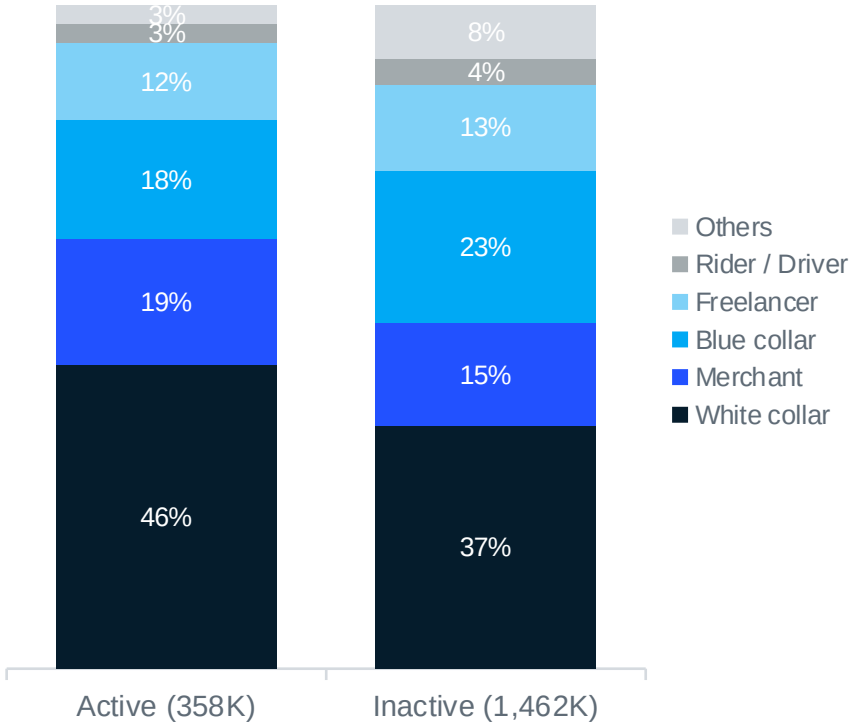

Note: % of CLICX customers in each occupation. Deposit = balance > 0; Payment = transacted in Sep 2026; Booked = loan booked

Source: Data team occupation analysis, AIS x KTB x OR x CLICX (Oct 2026)

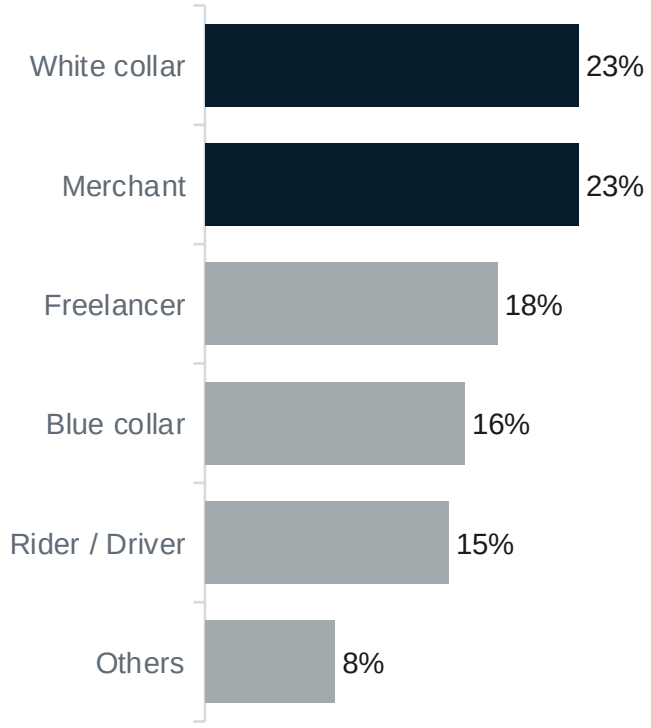

For active vs inactive CLICX customers, is the persona different?

Yes. Only 1 in 5 customers is active, and the active base skews to salaried White-collar and Merchants, while inactive customers skew to Blue-collar and unknown occupations

Occupation mix, % of segment

Active rate by occupation, %

SO WHAT

1. **Salaried and Merchants stay**
   White-collar and Merchant make up 65% of active customers but 52% of inactive ones, with an active rate of 23% each

2. **Blue-collar drops out**
   23% of inactive customers vs 18% of active ones. They apply for credit, get declined and leave

3. **Unknown means inactive**
   Customers with no occupation data are only 8% active, and 3 in 4 inactive customers never got a loan or funded an account

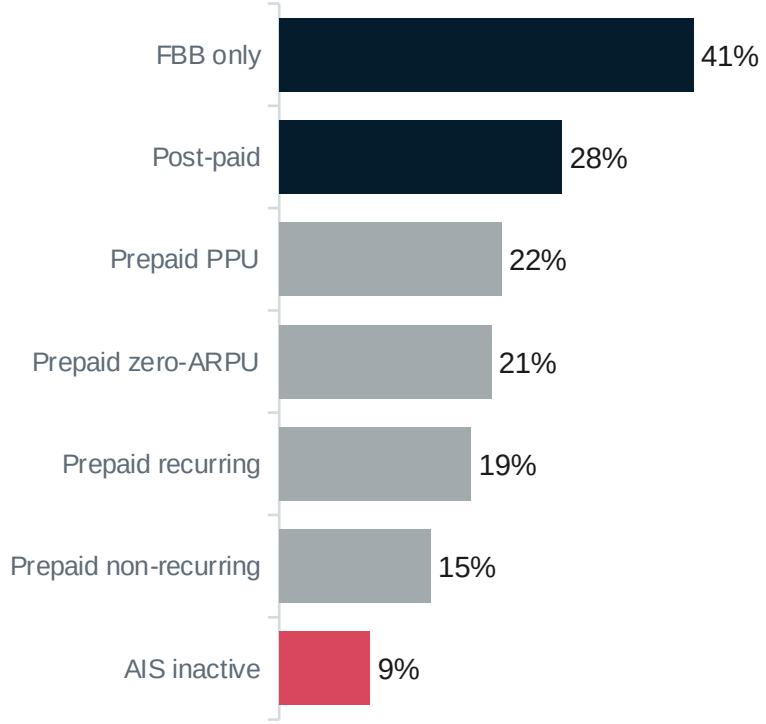

Note: Active = CLICX deposit > 0 or a booked CLICX loan. Inactive = all other CLICX customers. Totals: active 358K, inactive 1,462K

Source: Data team occupation analysis, AIS x KTB x OR x CLICX (Oct 2026)

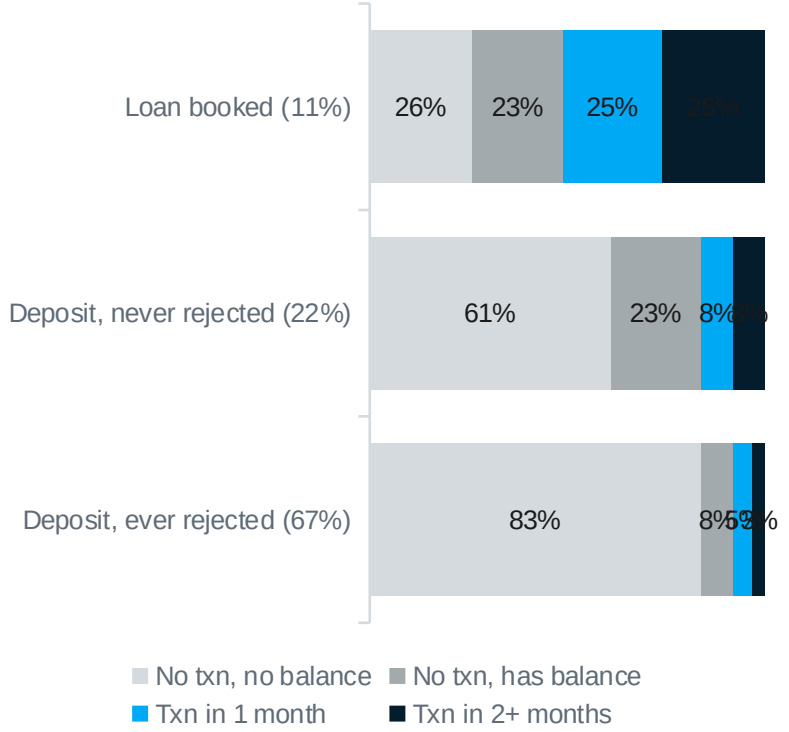

What else separates active from inactive customers?

Value-tier telco users and borrowers stay active. FBB and post-paid AIS customers are 2–4x more active than AIS-inactive ones, and borrowers pay 6x more often than declined depositors

CLICX active rate by AIS segment, %

Payment behaviour by product status

SO WHAT

1. **Telco tier predicts activity**
   FBB (41%) and post-paid (28%) users are most active; post-paid is 44% of the active AIS base

2. **A loan creates the habit**
   51% of borrowers pay through CLICX vs 8% of customers whose loan was rejected

3. **Rejection drives inactivity**
   67% of customers were rejected for credit at some point, and 83% of them never transact

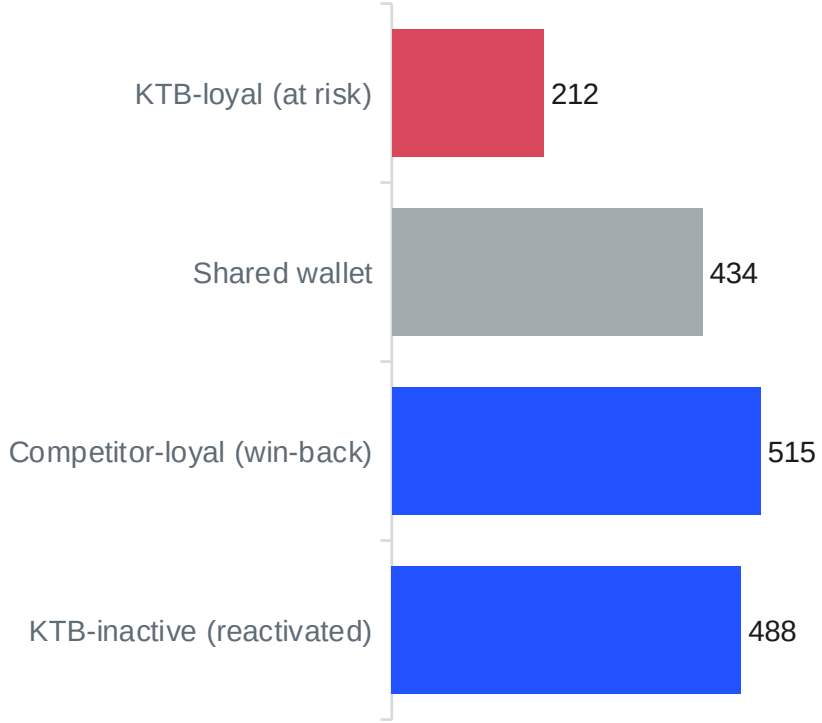

Note: Active = CLICX deposit > 0 or a booked CLICX loan; AIS segment base = 1.2M CLICX customers with AIS. Right chart: share of users by payment behaviour in CLICX

Source: AIS x CLICX matched data; Data for Business Strategy (14 Oct 2026)

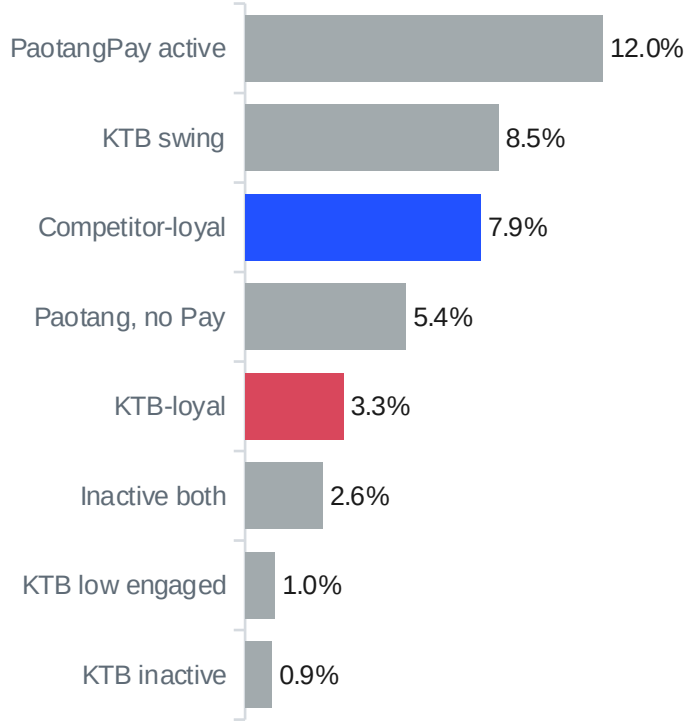

Does CLICX cannibalize KTB customers?

Limited. Only 13% of the 1.6M KTB x CLICX overlap are KTB-loyal customers; 61% are competitor-loyal or inactive with KTB, so CLICX mostly wins back or reactivates them

Overlap by KTB relationship, K

Penetration by KTB group

SO WHAT

1. **Loyalists are hard to pull**
   KTB-loyal penetration is 3.3%, less than half that of competitor-loyal (7.9%) and swing (8.5%) customers

2. **Defensive growth for KTB**
   515K competitor-loyal customers, 79K of them quality users, now bank with the KTB ecosystem through CLICX

3. **Reactivation, not substitution**
   488K were inactive with KTB for a year or more but signed up for CLICX

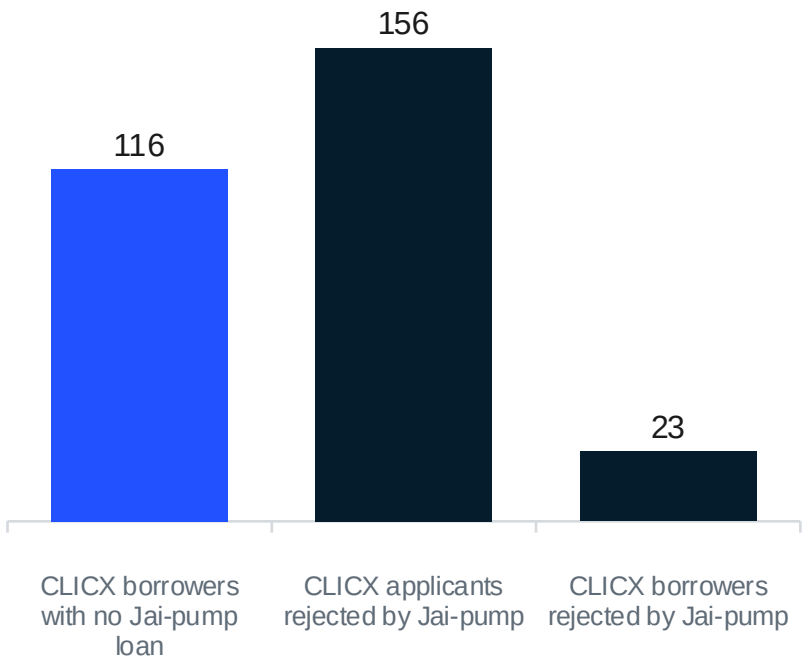

Note: KTB active = holds at least 1 of 4 core KTB products. Inactive = no KTB transaction in 1 year (incl. Paotang-only without PaotangPay). Shared wallet = KTB swing, low engagement and PaotangPay users

Source: KTB x CLICX engagement segmentation (Oct 2026)

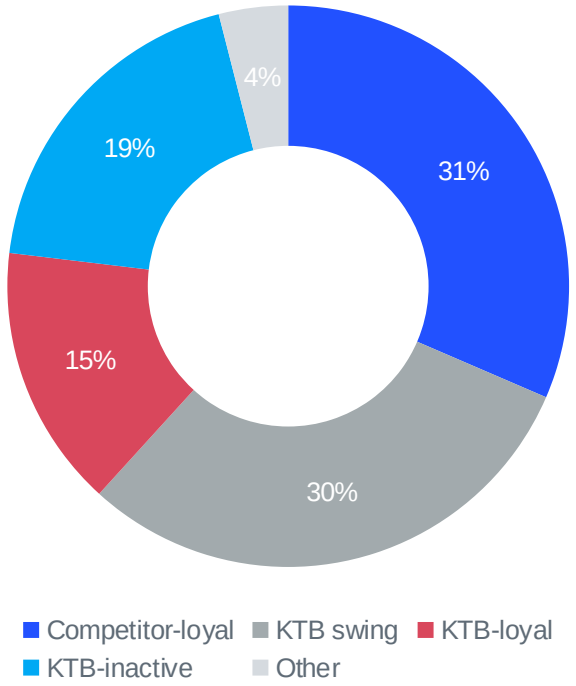

Does CLICX cannibalize KTB products?

Not on lending, where CLICX is additive. Its borrowers largely sit outside KTB's Jai-pump digital loan, and it catches customers Jai-pump rejects. Deposit cannibalization cannot yet be measured

Lending gained outside KTB, K

Quality customers (251K) by KTB group

SO WHAT

1. **Additive loan book**
   116K CLICX borrowers hold no KTB Jai-pump loan, new credit for the ecosystem

2. **A safety net for KTB rejects**
   156K applicants and 23K borrowers were rejected by Jai-pump in the last 3 months, demand that would otherwise go to competitors

3. **Value overlap is modest**
   Only 15% of quality CLICX customers (38K) are KTB-loyal. Deposit overlap still needs testing once CLICX balances reach the data room

Note: Jai-pump = KTB's digital personal loan. Rejected = rejected by Jai-pump in the last 3 months. Quality = payment in last month, deposit > THB 100 or a performing loan. CLICX balances are not yet in the data room

Source: KTB x CLICX matched data (Oct 2026)

What should we do with these answers?

Keep the consortium as the acquisition engine, but move from sign-ups to active, credit-led customers in the personas that already work

Q1

Mine the 47M base

Go after AIS first (3.7% penetration on ~32M), through myAIS and Dipchip, starting with 1.1M active AIS customers

Q2

Double down on what fits

Use Tech-Savvy aged 30–34 as the look-alike seed. Build a Multiple-Bank offer and a proxy-income journey for gig workers

Q3

Fix the credit funnel

Over 90% of Blue-collar and gig workers apply but 5–7% are booked. Recalibrate underwriting and offer deposit-backed credit-builder loans

Q4

Activate after onboarding

Get new customers onto 3+ use cases in 30 days. Give declined applicants a non-loan reason to stay; target prepaid and AIS-inactive customers

Q5

Position CLICX as KTB's growth arm

Report win-back (515K) and reactivation (488K) to KTB. Formalise Jai-pump reject referral; measure deposit overlap once data lands

Source: synthesis of Q1–Q5; actions build on Data for Business Strategy (14 Oct 2026) and CLICX 5-Year Business Plan
