CUSTOMER INSIGHTS

Who is CLICX really winning, and at whose expense?

Five simple questions about our first 1.8 million customers: where they come from, who they are, what they use, who keeps using us, and whether we take customers away from KTB

October 2026 | CLICX data as of Sep 2026; AIS, KTB, OR data as of Apr 2026

What have our first 1.8 million customers told us?

Our partners bring in almost everyone. Customers are mostly 25–39 and come to borrow. We mostly win people KTB had already lost, not KTB's loyal customers

#	Question	Short answer	Why we say so
1	Do all CLICX customers come from our partners' customers?	**Almost all**	96% were already KTB, AIS or OR customers. Only 51K came from outside. But just 3.7% of partner customers have joined so far
2	Are our customers the people we planned for?	**Mostly**	Tech-savvy people and freelancers sign up far more than others, as planned. People who use several banks and over-40s are hard to win
3	Do different customers come for different products?	**Same reason, different use**	Almost everyone (84–92%) applies for a loan. Office workers get loans, shop owners keep savings, gig workers are mostly turned down
4	Are active customers different from inactive ones?	**Yes**	Active customers are mostly office workers and shop owners with monthly phone bills. Inactive ones are often blue-collar workers or people turned down for a loan
5	Do we take customers or products away from KTB?	**Very little**	Only 13% of shared customers are loyal to KTB. Most used other banks or had stopped using KTB. 116K of our borrowers have no KTB loan

Source: CLICX, AIS, KTB and OR customer data

Do all current CLICX customers come from our partners' customers?

Almost all. 96% were already customers of KTB, AIS or OR, and only 51K came from outside. Yet only 3.7% of partner customers have joined, so there is plenty of room to grow

96%

of our 1.8M customers were already partner customers

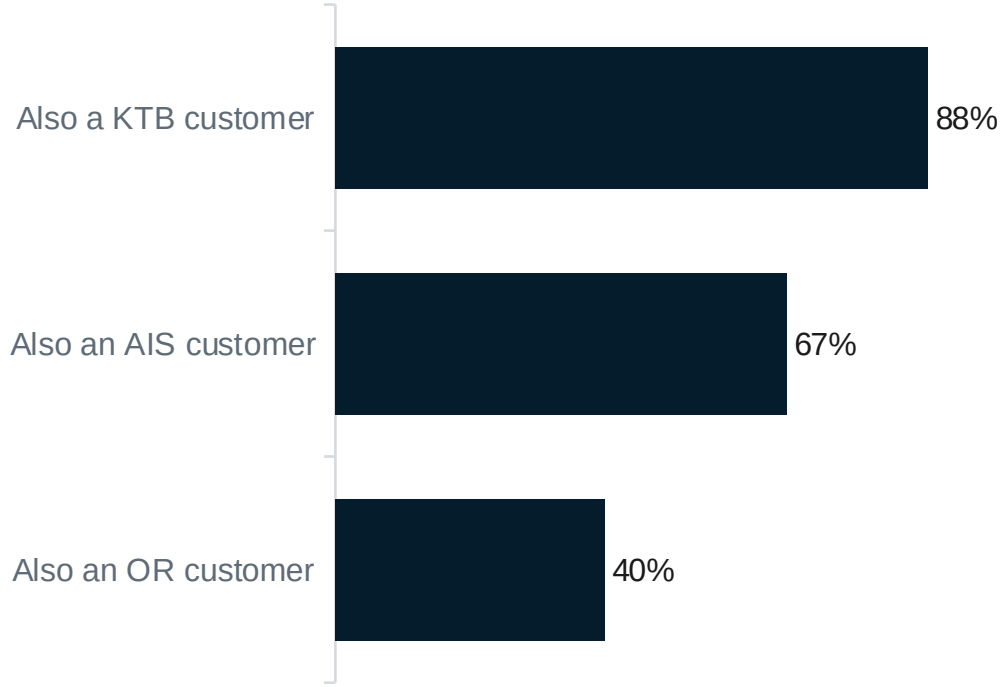

51K

customers came from outside our partners

3.7%

of 49M partner customers have joined CLICX

% of CLICX customers who are also with each partner (many are with more than one)

SO WHAT

1. **KTB is the front door**
   9 in 10 of our customers bank with KTB, mostly joining through the Paotang app

2. **Most know us through 2+ partners**
   That gives us more data to judge who to lend to and what else to offer

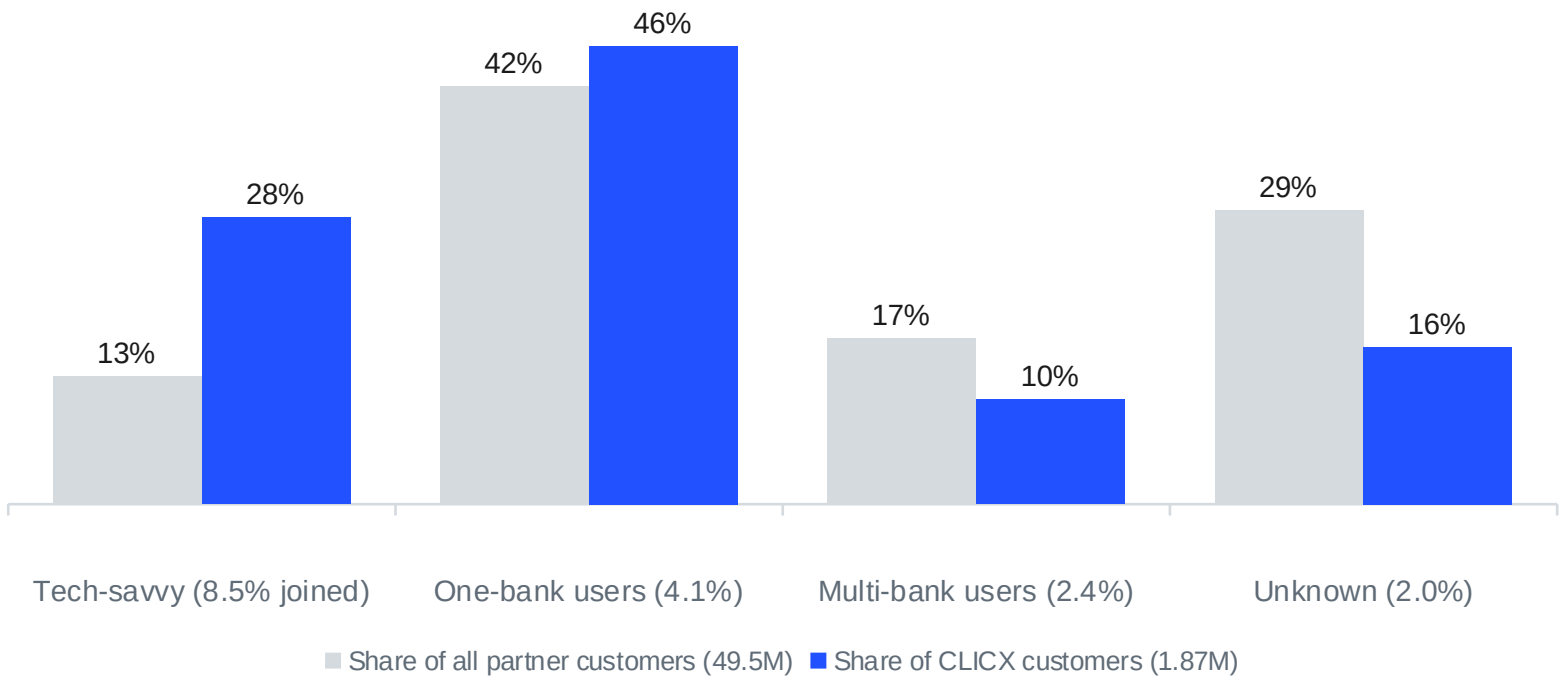

3. **AIS is the biggest opportunity**
   Only 3.7% of AIS's ~32M customers have joined, against 7.4% for OR and 4.7% for KTB

Source: CLICX customer data (Sep 2026); AIS, KTB, OR customer data (Apr 2026)

Are the people who come to CLICX the ones we planned for?

Mostly yes. Tech-savvy people, our main target, join at twice the average rate, and one-bank users bring the most customers. People who use several banks are not yet won

Customer type: all partner customers vs CLICX customers, %

SO WHAT

1. **Tech-savvy: target hit**
   28% of our customers vs 13% of partner customers. Best of all at ages 30–34, where 13% have joined

2. **One-bank users: the biggest group**
   850K customers, almost half of CLICX. 577K are KTB customers who do not use AIS

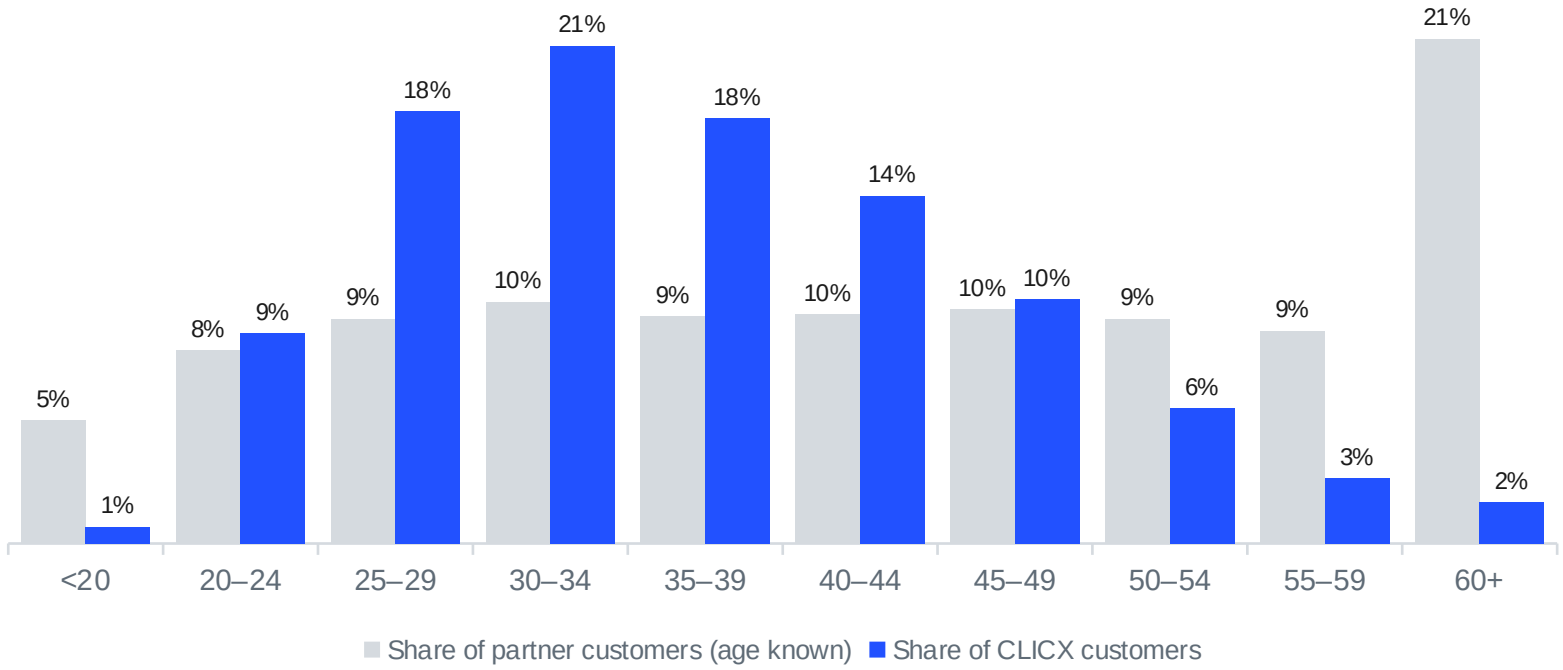

3. **Multi-bank users: not won yet**
   8.2M people, but only 2.4% have joined. People who already shop around need a stronger reason

Source: CLICX customer data (Sep 2026); AIS, KTB, OR customer data (Apr 2026)

Do our customers' ages match the people we can reach?

No. Most partner customers are over 40, but most of ours are 25–39 (56% of CLICX vs 29% of partner customers). Few people over 45 join

Age: all partner customers vs CLICX customers, %

SO WHAT

1. **25–39 is our sweet spot**
   1.05M customers. About 8–9% of people this age have joined, more than twice the average

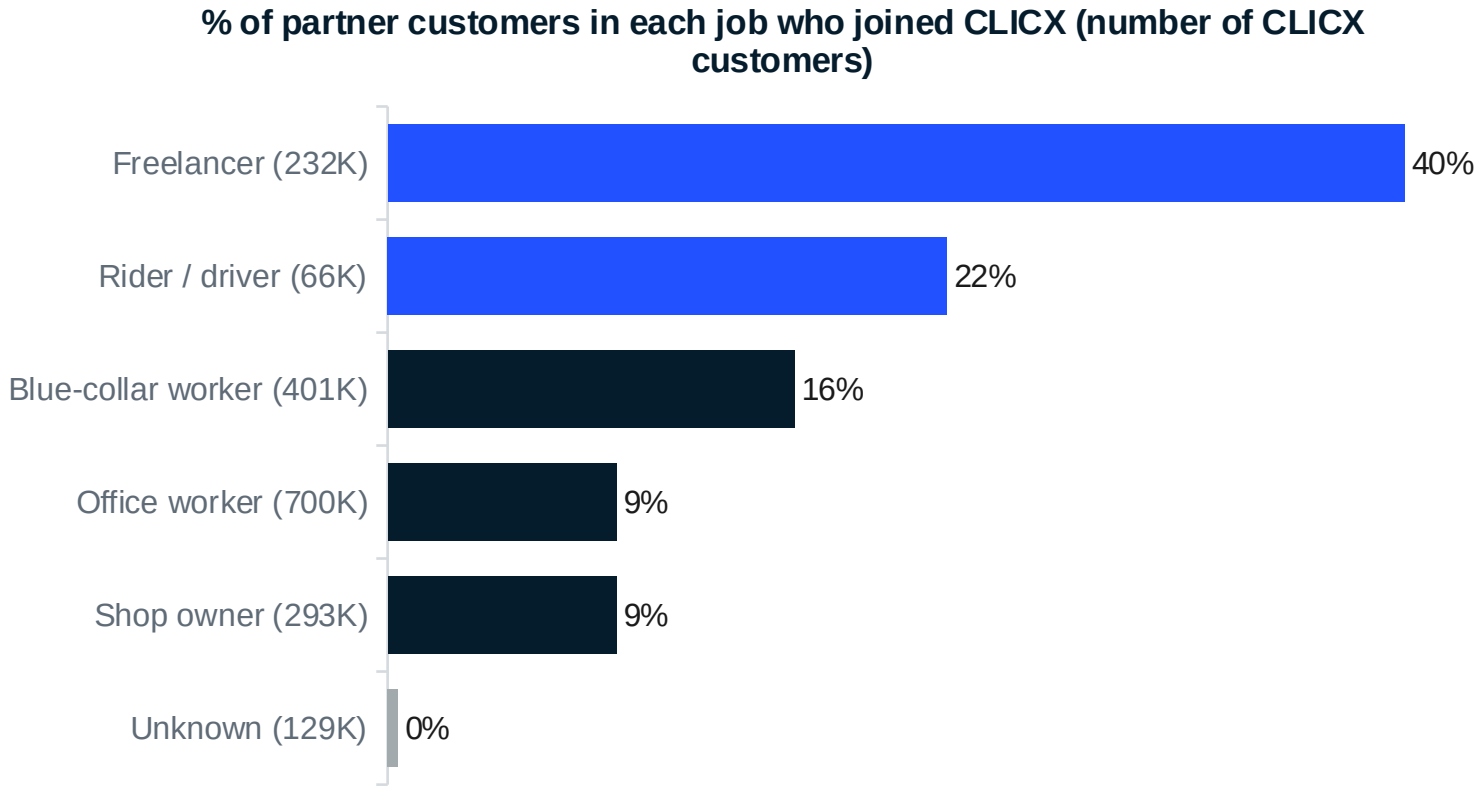

2. **Older customers are untouched**
   Over-40s are 58% of partner customers but 34% of ours. Only 0.3% of 9.4M over-60s have joined

3. **Plenty left in our core group**
   2.1M tech-savvy 25–39s and 5.4M one-bank 25–39s have not joined yet

Source: CLICX customer data (Sep 2026); AIS, KTB, OR customer data (Apr 2026)

Are we reaching people with real income but no payslip, as our strategy says?

Yes. Freelancers (40%) and riders/drivers (22%) join far more than anyone else, and 35% of our loans go to people banks usually turn away, above our 30% goal

SO WHAT

1. **Gig workers love CLICX**
   4 in 10 freelancers and 2 in 10 riders we can reach have joined. Proof that lending on phone and spending data works

2. **Workers are the bulk**
   Office and blue-collar workers are 1.1M customers, over 60% of CLICX

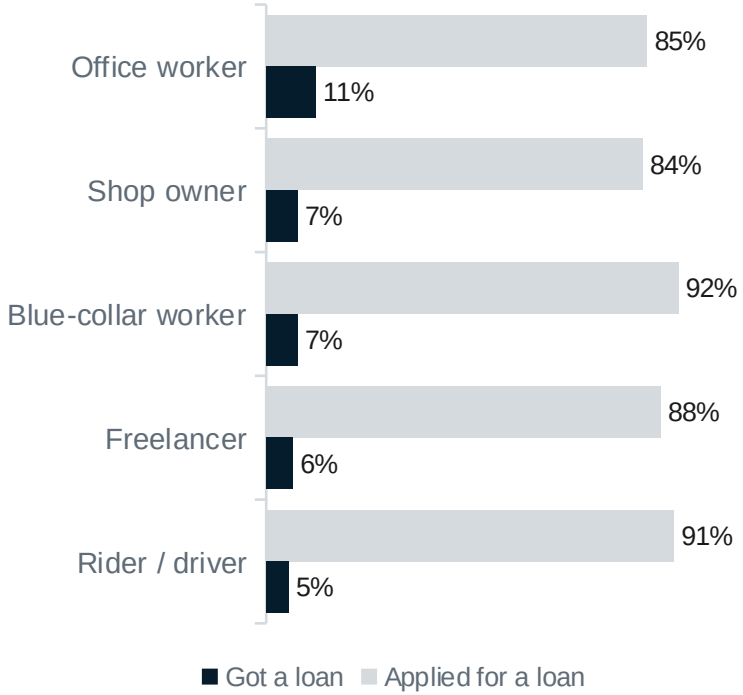

3. **Shop owners: room to grow**
   293K have joined out of 3.3M. A route into small-business loans

Source: CLICX, AIS, KTB, OR matched occupation data (Oct 2026); CLICX 5-Year Business Plan

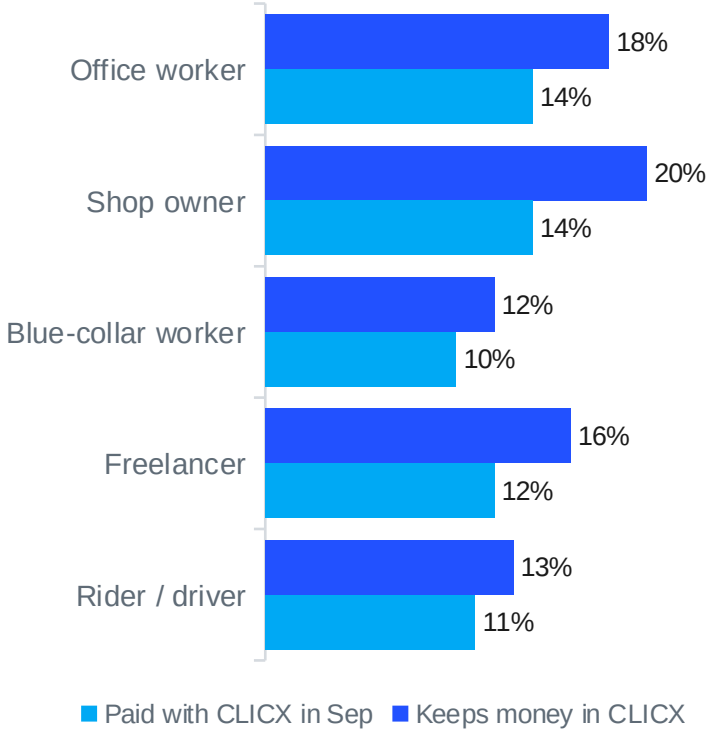

Do different types of customer come for the same product or different ones?

The same: almost everyone comes to borrow. But what they end up using differs. Office workers get loans, shop owners keep savings, and gig workers are mostly turned down

Loans: applied vs got one, % of each job type

Saving and paying, % of each job type

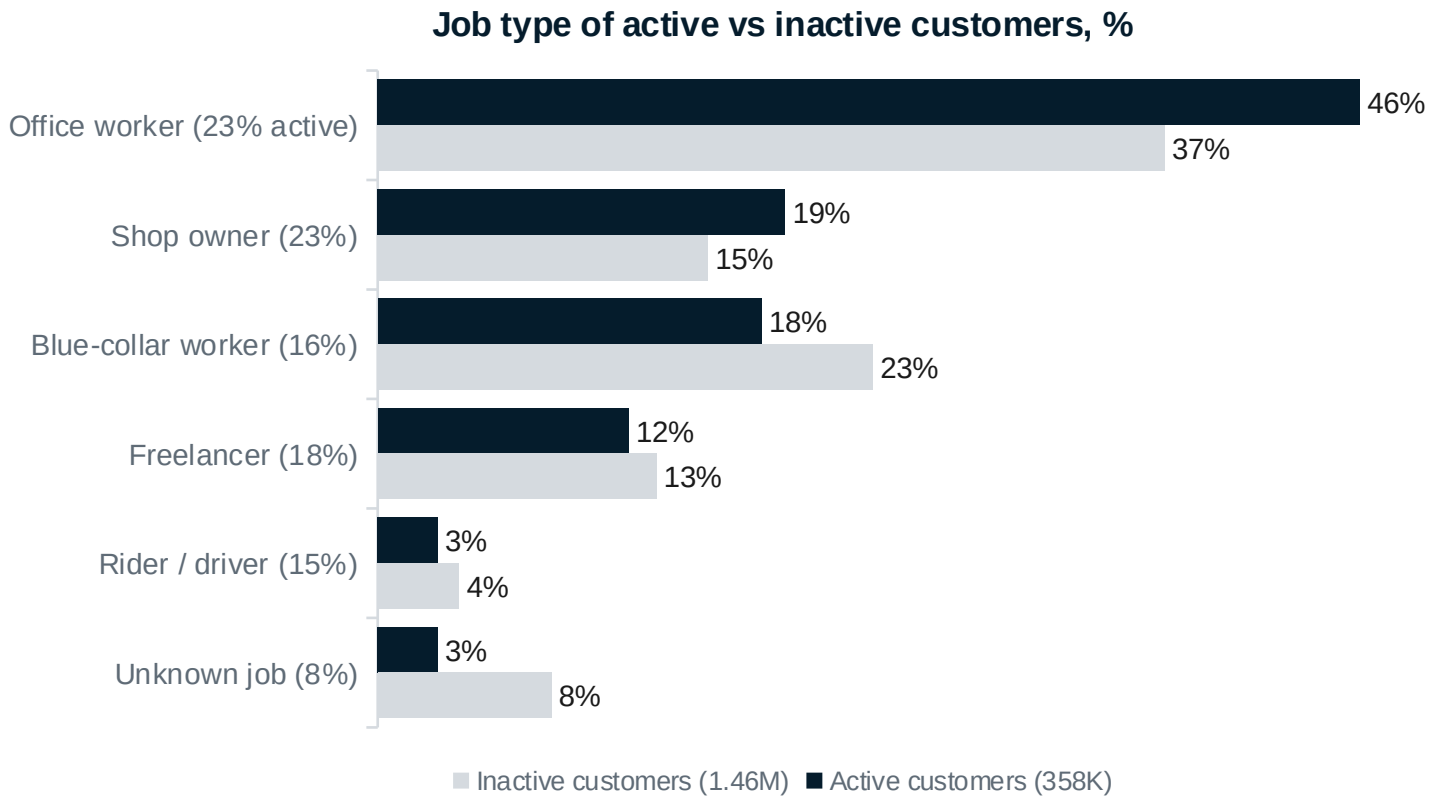

SO WHAT

1. **Loans bring everyone in**
   1.52M customers (84%) have applied for a loan, whatever their job
2. **Office workers use the most**
   Most likely to get a loan (11%) and to pay with CLICX (14%)
3. **Shop owners save**
   Most likely to keep money with us (20%), a natural fit for business accounts and loans
4. **Gig workers get turned down**
   Over 90% apply but only 5–7% get a loan. The problem is our approval rules, not demand

Source: CLICX, AIS, KTB, OR matched occupation data (Oct 2026)

Are active CLICX customers a different type of person from inactive ones?

Yes. Only 1 in 5 customers is active (has money in CLICX or a CLICX loan). Active customers are mostly office workers and shop owners; inactive ones are more often blue-collar workers

SO WHAT

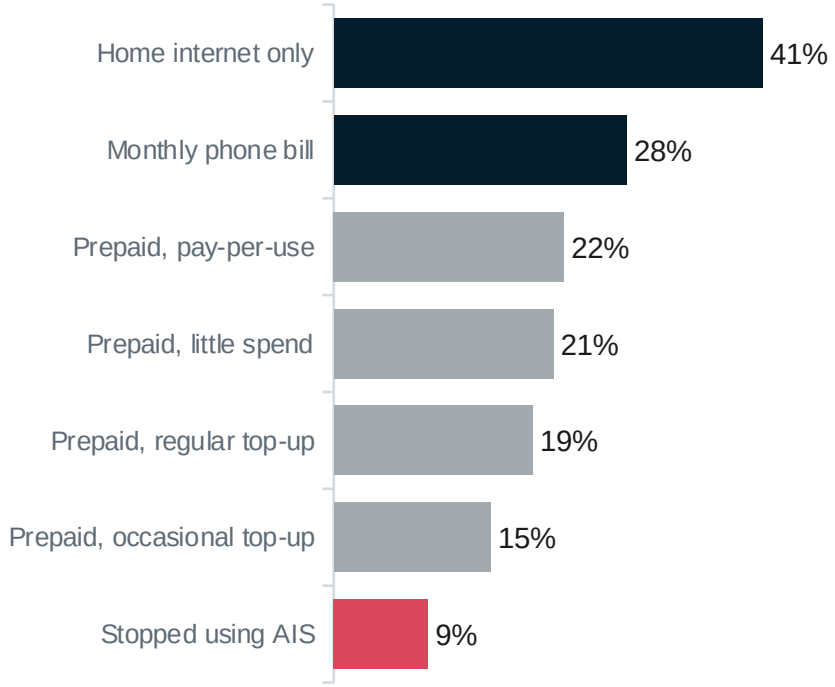

1. **Office workers and shop owners stay**
   65% of active customers vs 52% of inactive ones. About 1 in 4 of them is active
2. **Blue-collar workers drift away**
   They apply for a loan, get turned down and stop using CLICX
3. **Unknown job, unknown customer**
   Only 8% are active. Most inactive customers never got a loan or put money in

Source: CLICX, AIS, KTB, OR matched occupation data (Oct 2026)

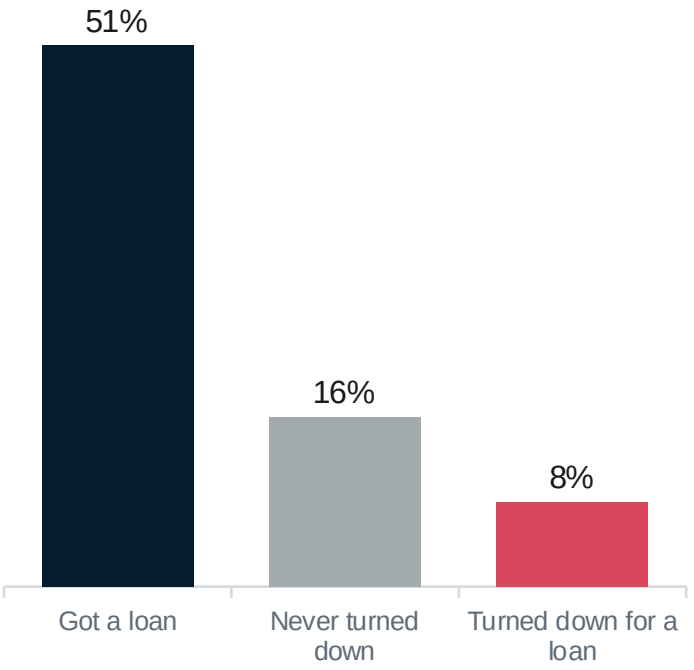

What else separates active customers from inactive ones?

Two things: how they pay for their phone and whether they got a loan. Monthly-bill AIS customers are 3x more active than lapsed ones, and borrowers pay with CLICX 6x more often

% active in CLICX, by type of AIS customer

% who pay with CLICX

SO WHAT

1. **Steady phone payers stay**
   Home internet (41%) and monthly-bill (28%) customers are the most active

2. **A loan builds the habit**
   Half of borrowers pay with CLICX, against 8% of people we turned down

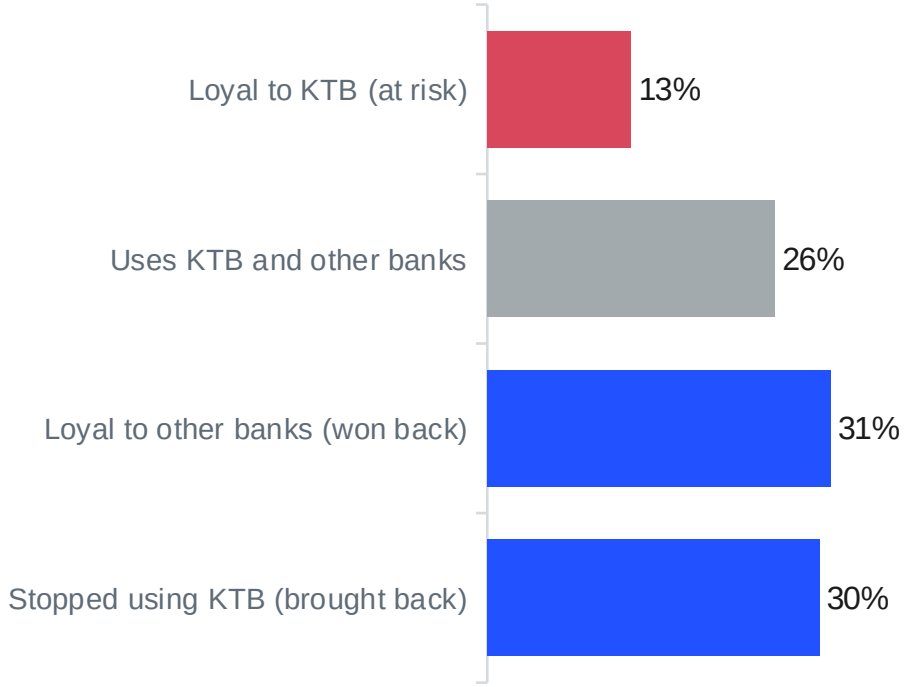

3. **Saying 'no' loses customers**
   2 in 3 customers have been turned down for a loan at some point, and most of them never use CLICX again

Source: AIS and CLICX matched customer data (Sep 2026)

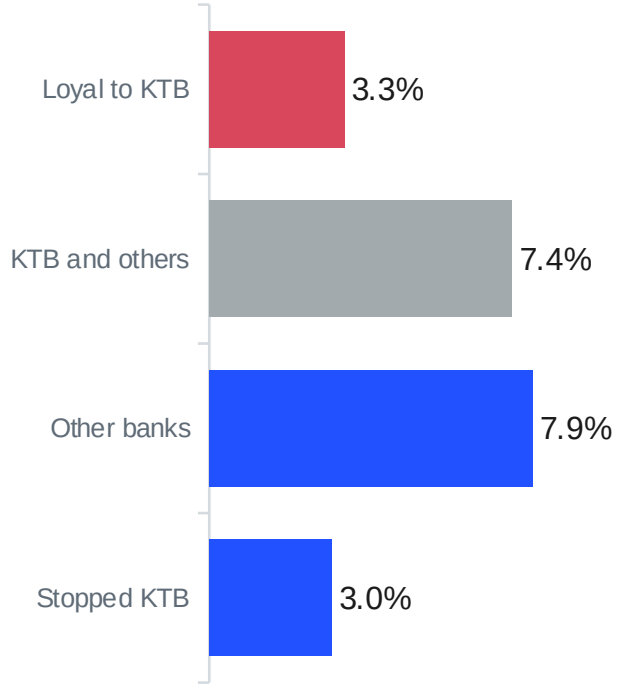

Does CLICX take customers away from KTB?

Very little. Of 1.6M customers we share with KTB, only 13% are loyal to KTB. 61% mainly used other banks or had stopped using KTB, so we are winning them back for the group

Customers we share with KTB, by how they use KTB, %

% of each KTB group who joined CLICX

SO WHAT

1. **KTB loyalists rarely switch**
   Only 3.3% of them joined, less than half the rate of people who bank elsewhere (7.9%)

2. **We win back other banks' customers**
   515K customers mainly banked elsewhere. Now they are back in the KTB group through CLICX

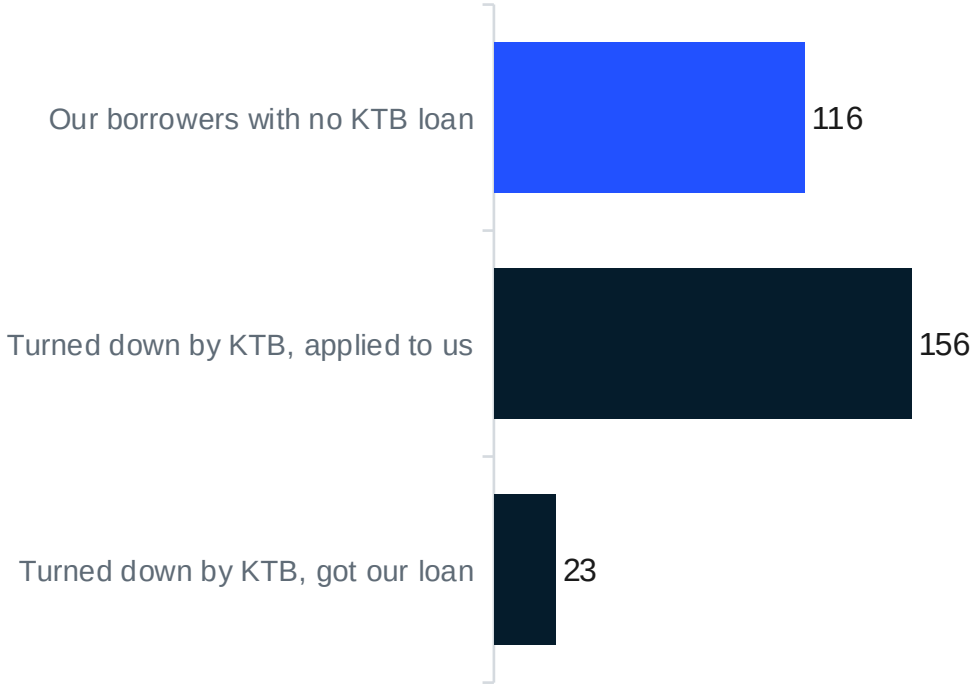

3. **We wake up lapsed customers**
   488K had not used KTB for a year or more, then joined CLICX

Source: KTB and CLICX matched customer data (Oct 2026)

Does CLICX take products away from KTB?

Not for loans: we mostly lend to people KTB's own app loan (Jai-pump) does not serve or turns down. We cannot check savings yet

CLICX lending that KTB's Jai-pump loan does not cover, thousand customers

SAVINGS: NOT KNOWN YET

We cannot yet see CLICX balances, so we cannot tell if money is moving out of KTB accounts.

Next step: once the data is in, compare shared customers' KTB balances before and after they joined CLICX

SO WHAT

1. **New loans for the group**
   116K of our borrowers have no KTB Jai-pump loan

2. **A safety net for KTB**
   156K people KTB turned down in the last 3 months applied to us instead of going to another bank

3. **Few loyal KTB users among our best customers**
   Only 15% of our most engaged shared customers are loyal to KTB

Source: KTB and CLICX matched customer data (Oct 2026)

What should we do with these answers?

Keep using partners to bring people in, and focus on turning sign-ups into regular users, starting with the customer types that already work

Q1

Reach more partner customers

Start with AIS: only 3.7% of its ~32M customers have joined. Sign them up through the myAIS app and AIS shops

Q2

Find more people like our best customers

Target tech-savvy 30–34s. Create a clear reason for multi-bank users to switch. Make it easy for gig workers to prove income

Q3

Say 'yes' more safely

Over 90% of blue-collar and gig workers apply but only 5–7% get a loan. Improve approval rules and offer small starter loans

Q4

Keep new customers using us

Get them using 3+ features in the first month. Give people we turn down another reason to stay

Q5

Show KTB we grow the group

Share the 515K won back and 488K brought back. Set up referrals for people KTB turns down. Check savings once data is in
